

# COVID-19 Cumulative Hospitalizations

May 03, 2020

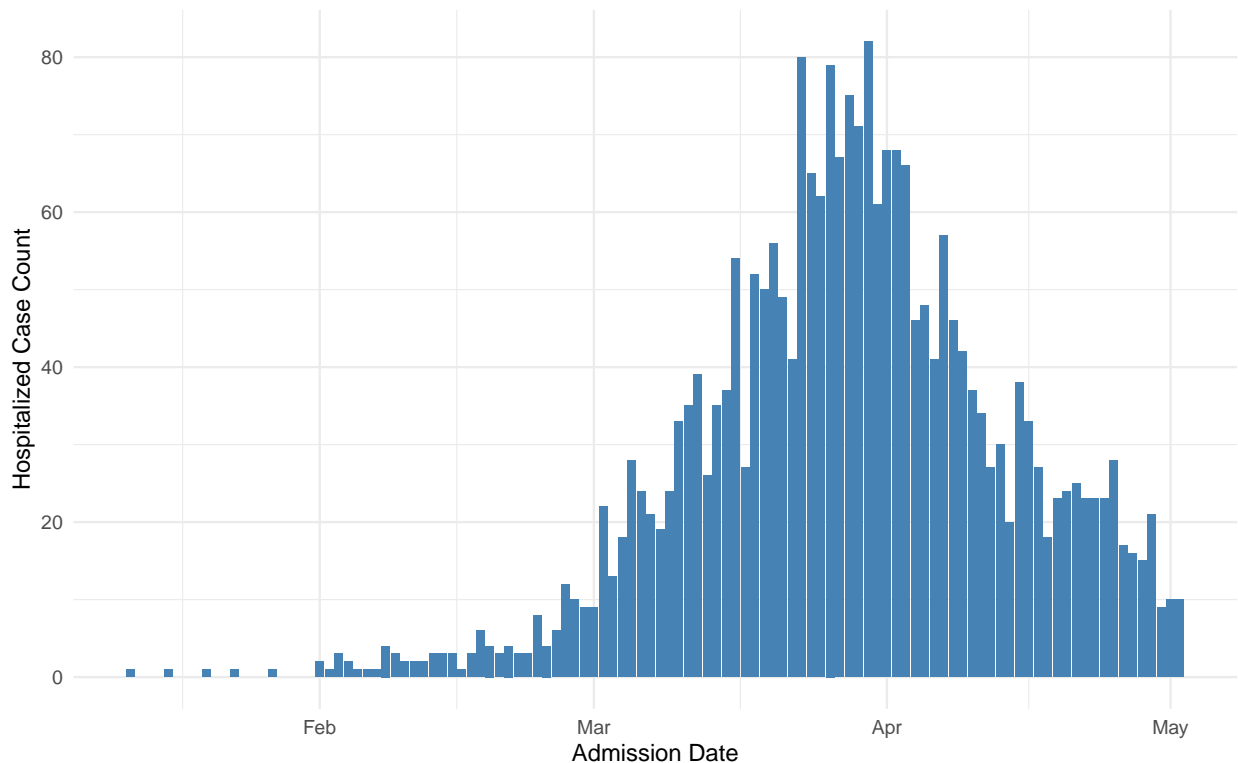

The following report contains data on hospitalizations identified among lab-confirmed cases of COVID-19 among Washington residents reported through 11:59pm on 2020-05-02.

*Note: The data are incomplete. To date, 96% of acute care hospitals have reported retrospective hospitalizations that occurred since January. Hospitalizations are being identified prospectively at 84% of acute care hospitals. With the exception of two hospitals, these hospitals are smaller facilities.*

**Table 1. COVID-19 Cases Hospitalized**

Hospitalized	Count	Percent of Cases
No	8619	77.3%
Yes	2531	22.7%
Unknown	4035	26.6%

**Figure 1. Epidemiological Curve of Hospitalized COVID-19 Cases by Date of First Admission\***

\* 50 records indicate the case was hospitalized but admission date is missing. These events are excluded from the chart.

**Figure 2. Epidemiological Curve of Hospitalized COVID-19 Cases by Illness Onset**

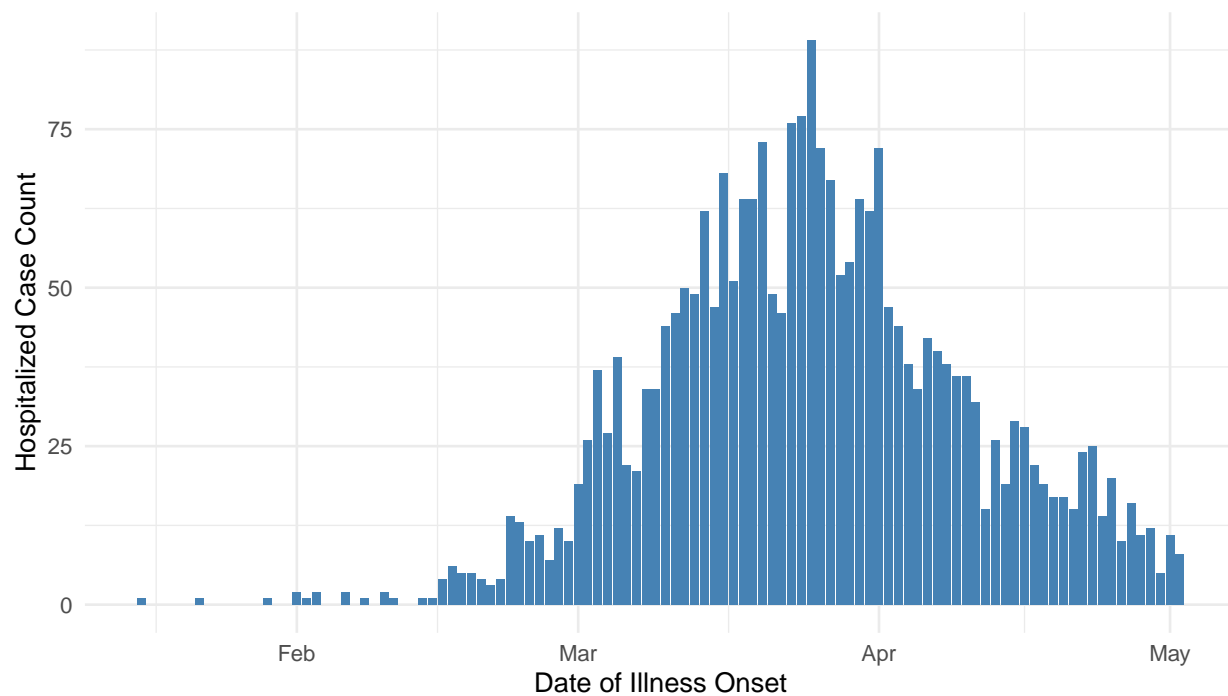

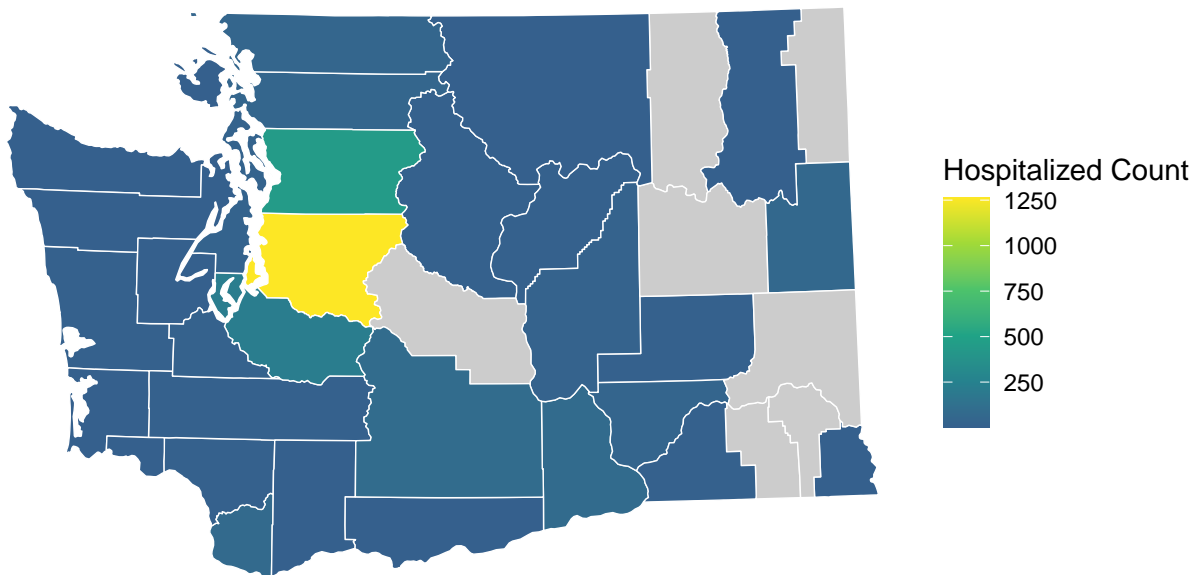

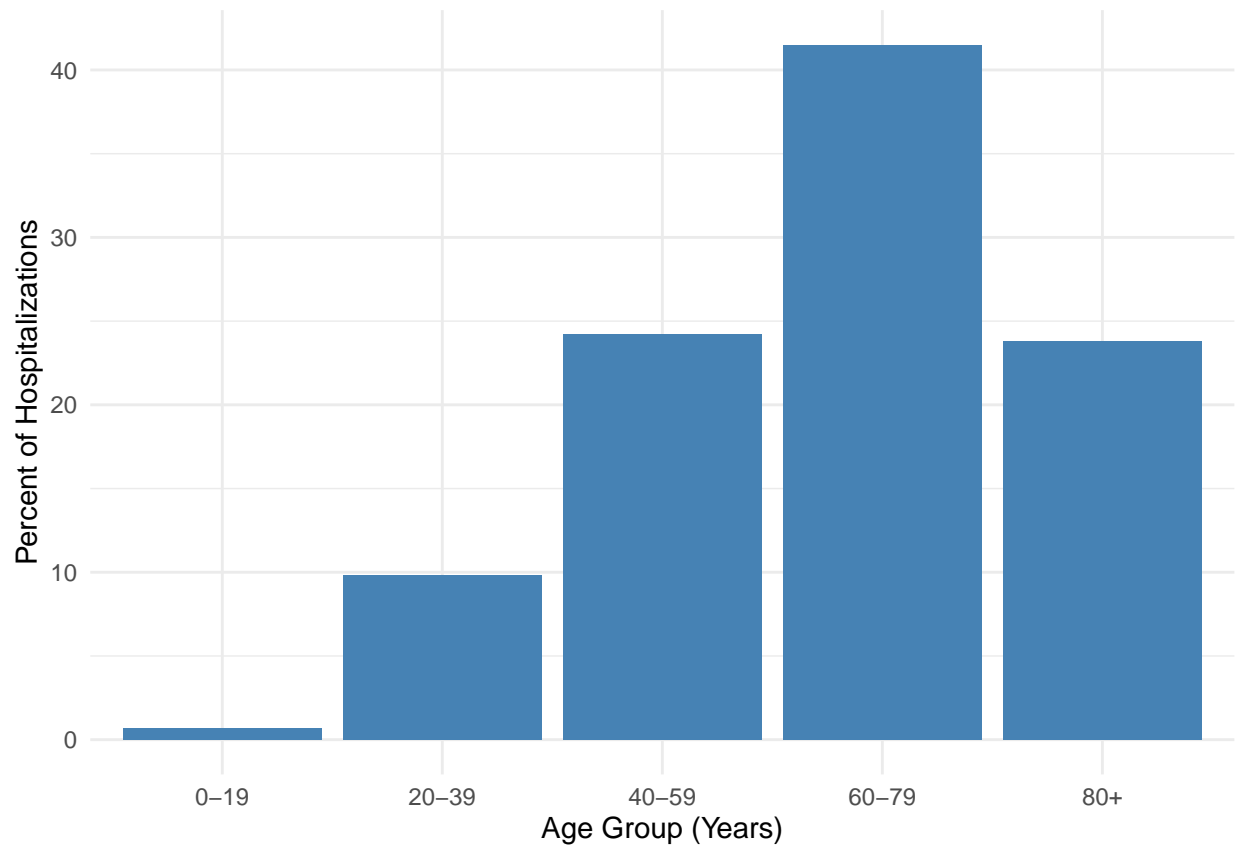

Figure 3. Hospitalizations by County of Residence

\*Counties that are greyed out have had 0 COVID-19 hospitalizations identified to date.

**Figure 4. Hospitalizations by Age**

**Table 2. Hospitalizations by Age**

Age Group (years)	Percent of Hospitalizations
0-19	0.7%
20-39	9.8%
40-59	24.2%
60-79	41.5%
80+	23.8%
Unknown	0.0%

Figure 5. Hospitalizations by Sex

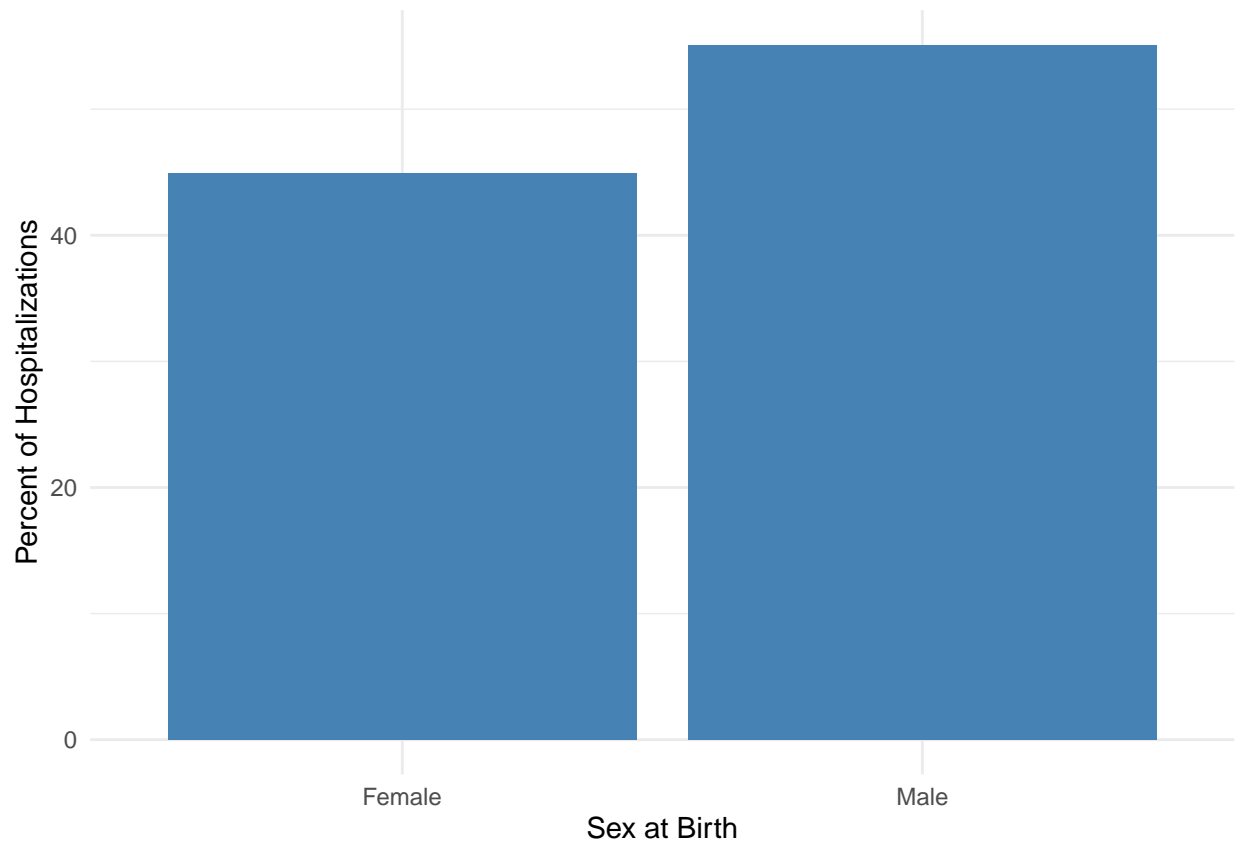

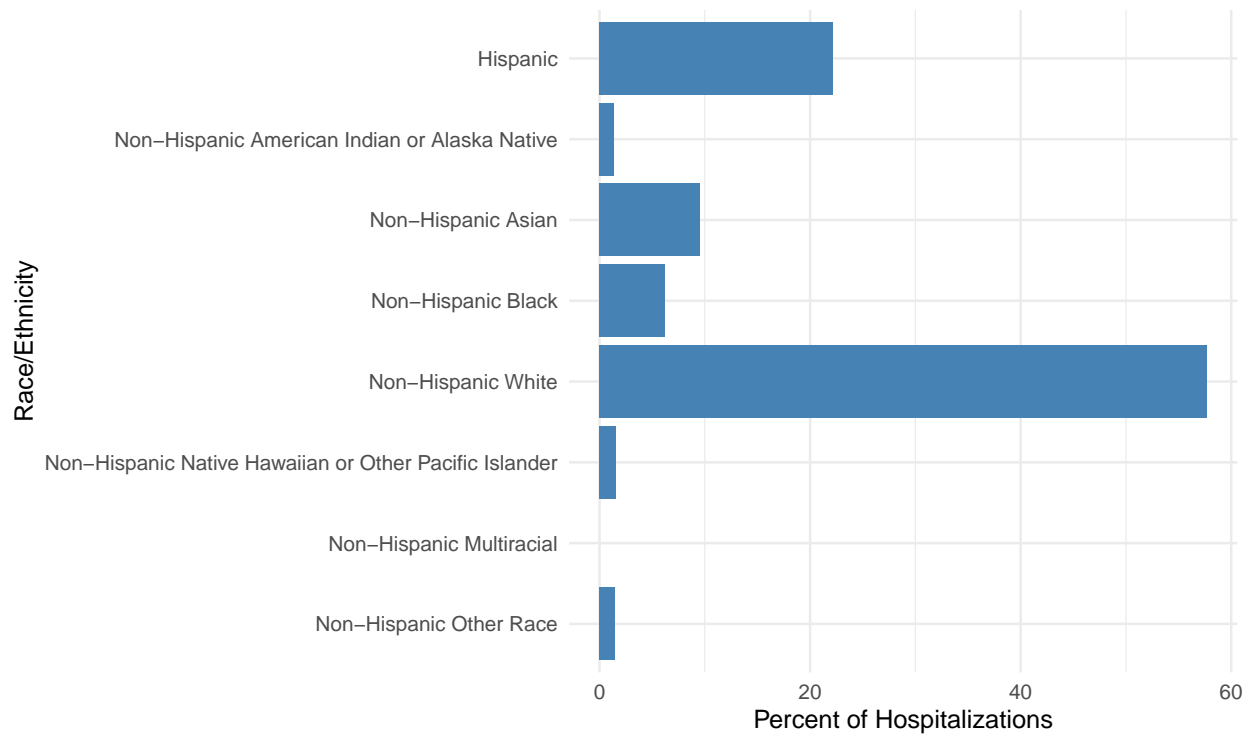

Table 3. Hospitalizations by Sex

Sex at Birth	Percent of Hospitalizations
Female	44.9%
Male	55.1%
Unknown	1.4%

**Figure 6. Hospitalizations by Race/Ethnicity**

**Table 4. Hospitalizations by Race/Ethnicity**

Race/Ethnicity	Percent of Hospitalizations
Hispanic	22.2%
Non-Hispanic American Indian or Alaska Native	1.4%
Non-Hispanic Asian	9.5%
Non-Hispanic Black	6.2%
Non-Hispanic White	57.7%
Non-Hispanic Native Hawaiian or Other Pacific Islander	1.6%
Non-Hispanic Multiracial	0%
Non-Hispanic Other Race	1.5%
Unknown	30.7%
